SAFETY BULLETIN #9-03

June 13, 2003

Powered Industrial Truck Mounting and Crane Signal Stickers

During the 2002 Safety Negotiations, the Joint PCMSC Safety Committee agreed to develop and post proper mounting procedure stickers for use on terminal equipment to remind operators of the proper and safe entry and exit procedures. It is hoped that these stickers and the safety mounting reminders will reduce the number of slip, trip and fall accidents from these pieces of equipment.

Further, in order to ensure consistency and safe signaling, the Joint PCMSC Safety Committee agreed to a uniform set of container gantry crane hand signals for use on container operations using a container gantry crane. Utilization of "special signals" appears to be allowed by ASME B30.2 Section 2-3.3.2. These hand signals will be taught by PMA in our General Safety Training. The signals should be posted in appropriate locations on the crane.

(NOTE: OSHA regulations in 29 CFR 1917.45 (10) require verbal communications between the operator's cab and the base of the gantry of all rail-mounted cranes. The hand signals must be used in conjunction with the Federal OSHA requirements. Hand signals only cannot be substituted.)

(NOTE: these signals did not replace the original ANSI type crane hand signals published for whirley cranes.)

PMA developed the new stickers and made the initial purchases for member companies. This bulletin outlines the source and pricing for additional member company purchases. These stickers could also be utilized by non member companies if applicable.

All Employers should be aware of the attached products, source and pricing. As noted on the pricing sheet, alternate sizes and backing options may be available on request.
